

DISCHARGER, ELECTROSTATIC, AIRCRAFT, MITTENS MMK100

The Mercatus **MMK100** (NSN:5920-01-411-7033) Electrostatic Charge Removal Kit was designed specifically for Electrostatic charge removal from the F/A-18 aircraft canopy and windscreen in a manner that protects the user from electrical shock and minimizes the potential of scratching the canopy/windscreen surfaces.

Features

The kit consists of a pair of heavy gauge rubber isolative mittens to be encased within a shell of continuous filament polyester fabric. This outer fabric shell is woven throughout with carbonized nylon static conductors designed to safely dissipate the buildup of electrical charges.

The cloth mittens are to be worn over the rubber mittens and interconnected with the short jumper cord provided. The longer, grounding cord is to be connected to either cloth mitten and to the ground point in the nose wheel well of the aircraft. The mittens are worn by the user to wipe any/all static charges from the canopy/windscreen surfaces that are prone to develop during flight.
